CARING FOR YOUR AC SYSTEM – DUBAI CLEAN'S MAINTENANCE TIPS

A few simple habits between professional cleanings keep your AC running quietly, cooling efficiently, and your indoor air healthy.

1

Rinse or replace filters monthly

In Dubai's dust, filters clog faster than the manufacturer assumes. A 60-second rinse keeps airflow strong and your power bill down.

2

Run fans on Auto, not Constant

Continuous fan mode pulls humidity back into the room from a wet coil. Auto lets the coil drain between cycles and stops mould forming.

3

Set the thermostat to 24–26 °C

Below 22 °C, the system runs longer with little extra comfort gain. 24–26 °C is the sweet spot for comfort, efficiency, and coil health.

4

Keep vents and returns clear

Furniture, curtains, and rugs blocking vents force the system to work harder and create cold spots. Aim for 30 cm of clear space around every grille.

5

Schedule a deep clean every 6 months

Filters catch the obvious; the duct interior, coil, and drain pan need a professional clean twice a year to stay sanitised.

6

Watch for the warning signs

Musty smell, water dripping from a vent, ice on the coil, or a sudden electricity bill jump – these are the early signals. Call us before they turn into a breakdown.

7

Don't run AC with windows open

Even a slightly open balcony door doubles the load on the system, drives up the bill, and pulls outdoor humidity onto the coil. Seal up while you cool.

8

Service after a sandstorm

Heavy sand events coat the outdoor unit's fins and choke the indoor filter. A quick post-storm check restores efficiency and prevents long-term damage.

Need help with any of the above? Call 050 2763606 or visit www.dubaiclean.com – same-day service available across Dubai.

Thank you from the Dubai Clean team.

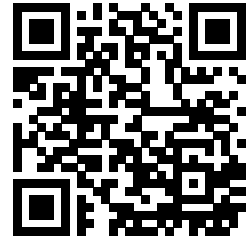

Cleaner air. Cooler rooms. Less power. Job done.
